Leverage the Power of Unique Weekly Binary Options Offered by NADEX Binary Options Exchange for a More Simple Way to Collect Another Potential Weekly Paycheck from the Options Markets

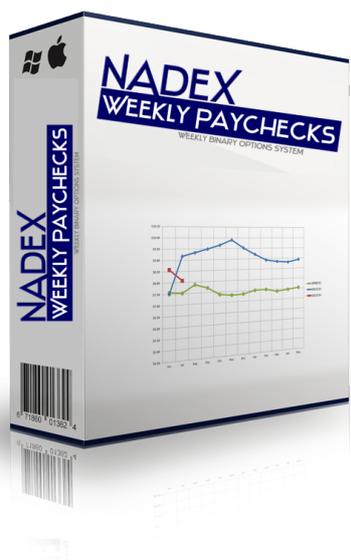

Stunning New Advanced in Options Trading Offers You Stunning New Options Weekly Paychecks Advancements Using the New NADEX Binary Options.

Note: we are not associated nor do we represent NADEX.com in

any way but we develop trading systems & strategies for binary options and similar types of options products as well as vanilla options – old school options as you can see on this site and on OptionsTradingAUTHORITY.com Our concern is to try and teach you how to become a great trader no matter what the platform.

[NADEX](#) (**North American Derivatives Exchange**) as a brilliant new options exchange that has come on the scene with foresight anticipating the rise of binary options.

Now NADEX has struggled for a while to gain popularity with binary options traders in competition with the global binary options brokers. But the trend is shifting as traders realize there's nothing like good old American super solid Financial markets. People realize that with NADEX their money is protected and they can make as much money at NADEX as they want without any problem of a payout of profit.

That said NADEX is a very different type of binary option. Their binary option is a cross between A regular vanilla option” A credit spread and A binary option. You

can trade in and out of the binary option. And you can make money from movement in your underlying stock, Index or 4X pair whereas the globally popular binary option requires full expiration for you to make your money. And this important point with NADEX means that we can pluck off 30% to 60% weekly options profits with a small movement in the underlying asset. Plus we can hold till expiration and make up to 90% profit for the week.

As you've probably gathered by now we're looking to trade the Weekly binary option on NADEX. Since this site is about the weekly paycheck we've decided to keep the same time pace on the weekly level. Why? Well if you enter into the day trading around that's a different mindset and it takes a lot more activity. You can make just as much or even more potentially, on the weekly level versus daytrading. Often many tend to do better in gaining wealth as they personally work less! And on top of that getting too involved in trading is usually counterproductive .

Check out this video on how we look to pluck a weekly paychecks off of NADEX, or maybe even a couple Weekly paychecks per week.

Here are a few nice benefits trading NADEX versus buying vanilla options or selling credit spreads:

- You can pick your own risk
- If you trade out of the money contracts your max risk is actually reduced
- You can pair trading near the money or out of the money binary options with a momentum burst strategy and profit quite nicely
- Imagine making 50% a week on average all of your binary options trading position
- Here's where the NADEX binary option is like a credit spread: We can "sell" an out of the money

binary option and let it decay therefore capturing the credit as we stay on the right side of the strike price

How this system works:

- We're going to look to capture a nice profit by combining a Price burst entry point with a good risk to reward binary option.
- We are going ride that position and if it does not stop out according to our Price chart indicator then we are going to hold the position and make the full profit
- But a lot of times it's just easier to take the money and run once we have A good move in our favor

Performance!

See some performance examples below. These systems results are based off the entry rules that are in the course, the system rules that you'll be getting when you purchase this course.

The thing about NADEX vs. other binary options brokers is that their type of binary option, which is much different than the traditional broker's, is that you can control your risk. You can exit any time you want to reduce a loss or claim a profit. That said you still have the ability to make the complete win by expiring past your strike by only one pip or tick. But it gets better.

You can buy max risk binaries where your max risk is say \$250 to where your profit could be \$750 (minus the spread so like \$680) trading 10 contracts. (yes they use contracts like vanillas). Those are slightly OTM binaries. You can trade ATM binaries which are most similar to the standard broker except that a NADEX ATM

binary can give you a “100% payout” whereas other brokers give you a 65% to 80% payout. The pay out is to risk. So you buy an ATM binary at \$500 (10 contracts) your risk is \$500 and payout if expired in your favor is \$500 – and that’s even a much better deal.

Anyways you can get our NADEX 101 course for more information. But now lets look at results!

The following are systems results based on the NADEX Weekly Paychecks System1 on DJ30 Futures “YM”

Now these results are based on the win or loss till expiration. You don’t have to let the binary expire worthless because you can trade out of it early to cut losses (cool eh!):

Here are 6 months of results using our intraday data. Each new line is a new week.
