

OZ5 Naked Options System

NAKED OPTIONS SYSTEM

OPTIONS WEEKLY PAYCHECKS

NAKED OPTIONS STRIKER

OZ5 Naked Options Selling System performance sample. The following system sample is based on the stock "MU" or Micron Technology, an "old school" tech stock.

- Lower price, lower capital requirement
- Average ATM weekly option with 5 days left to expiration to sell is .64 at the time of this writing
- A 2 point gain in our favor will reduce our short premium to \$.07 excluding time decay
- We play momentum micro swing breaks
- If we get 2 points from the entry trigger we close out the position on this stock for an approximate .57 net on the naked
- We use stop losses set by contingent order or with the option of defining max risk by placing a stop loss on the option itself.

0.3	Per week net

Now 6.4 options points may seem small but that's a 19% cash return for 5 months. Annualized that comes out to 15.36 naked options points of MU for a cash 47% Return for the year. Now that's pretty good, especially for approximately 30 minutes of "work" per week!
