There is no reason why you, we or anyone shouldn't be doing PANIK3 options strategy at all times. (and this is from over 20 years of observation!). This strategy is so fundamental to human nature in the markets it's one of the closest things to "easy money" in the markets.

Here with AAPL and NFLX we just ran the strategy for a year as a system taking all trade setups as they occurred. There was no picking and choosing.

Now AAPL was counted in post 7:1 split prices. Options have gotten much cheaper on AAPL and AAPL moves much slower with it's new, fat, 7 fold greater float.

Once you get this strategy you'll be able to see that

these are ALL the exact trade setups with none left out. This strategy is a great add on to any system and takes only a few minutes to trade. We trade the day bars and use contingent orders to automatically get us in and out during the trading day. Opportunities usually show up about once per month on average.
